I am interested in the nature of re-enactment or re-creation and the notion of historical aesthetic forms. Close attention to the relation between an art form and its material support frames these topics. Part of my work is how it is embedded in its temporary context, enabling context and work to read each other as opposed to just comment on each other.

I like for there to be a gap between the simplicity of certain gestures and the complexity of making them happen. Imbalances between labour and reward help foreground the absurdity of reproducing or reanimating an object or image as a way of carrying it through time

The models of narrative I appropriate in my visual work coexist on a parallel track, namely in my practice of writing fiction.
